The block diagram illustrates the system architecture. At the top, three main units are shown: the 'Input accepting unit' (3801), the 'Program information storage unit' (1601), and the 'Moving picture storage unit' (4701). These units are connected to a central 'Program guide display unit' (4702). Inside the 'Program guide display unit', there are four sub-units: 'Display program information acquiring means' (38021), 'Time information acquiring means' (47022), 'Moving picture acquiring means' (47023), and 'Display method determining means' (47024). The 'Display program information acquiring means' (38021) is connected to the 'Input accepting unit' (3801) and the 'Moving picture acquiring means' (47023). The 'Time information acquiring means' (47022) is connected to the 'Program information storage unit' (1601) and the 'Display method determining means' (47024). The 'Moving picture acquiring means' (47023) is connected to the 'Moving picture storage unit' (4701) and the 'Display method determining means' (47024). The 'Display method determining means' (47024) is connected to the 'Display program information acquiring means' (38021) and the 'Moving picture acquiring means' (47023). The 'Program guide display means' (47025) is connected to the 'Display program information acquiring means' (38021) and the 'Moving picture acquiring means' (47023).
